

CRC Plan

The following are the roughly priority ordered required updates before we can have a user try the CRC-Hub:

Maintained in project GitHub repo at: [docs/CRC-Plan.md](#)

Graham

To-Do

- Get undo-redo working again
- HTML editor:
 - return and tab need to not jump out of editor
- Add existing single patient full schedule chart to a draw / panel in the new UI
- Add single event patient checklist to be displayed from the patient page and selected date. See if the template the Jon created can be used for this checklist.
- Make error messages jump to concept with error
- Update what is displayed on Info / Help panel
 - Write/generate a simple user guide with focus on how to create a study design
- Deploy to Azure
- Create a dev/test instance on Azure
- Document and test the steps to bring on a user
- Create a repeatable demo script (whoever is done first will do this)

In-Progress

- Show Patient page when no patients to allow getting started on study
-

Done

- NA

Mike

To-Do

- Review single event patient checklist that Jon created to determine if Graham can use it.
- Update to current Freon version. We need to discuss how to approach this.
- Finish Checklist display and printing as HTML:
 - Add unscheduled event support to checklist (mike)
 - Add Schedule and Checklist details
 - Make links to systems be real html links
 - Make tasks be clickable checkboxes
 - Improve formatting overall
- Improve validation error messages (mike)
- Determine whether optional from Freon is needed and where
- Make sure data entry of shared-tasks, shared-steps still work. Make sure they display in checklist like a non shared task
- Repeating Visits with occurrence on the schedule
- Remove choice of the visit you are on when 'start when' is a reference. Needs custom scope added.
- make default study have 'day 0' as start when to avoid the error.
- Not needed for user but really need to know how well AI can generate a study DSL from a protocol document. Try with JSL protocol reader?

In-Progress

- Get rid of the 'Notes' stuff, have only description and explore always having descriptions displayed.
-

Done

- NA

Jon

To-Do

- Add multi-patient full schedule chart

In-Progress

- Review new UI implementation done by Graham...

Done

-
