

Itemized List of Changes Made in CRCHub

CORE

1. Box Types Enhanced

Box Types:

- **ItemGroupBox**: Grouped items with expand/collapse functionality
- **ItemGroupBox2**: Enhanced ItemGroupBox with selection capabilities
- **ListGroupBox**: Grouped lists with add/CRUD/expand capabilities
- **MultiLineTextBox2**: Enhanced multi-line text box implementation

Covered:

- Added Caching Support
- Added Factory Methods
- Added Utility Methods**
- Export Updates
- Internal Exports
- Added type guard functions for new box types

Enhanced Properties: New box types include properties for:

- Expand/collapse functionality (`isExpanded` , `canExpand`)
- CRUD operations (`canCRUD` , `canAdd` , `canDelete`)
- User interaction (`canUnlink` , `canShare` , `canDuplicate`)
- Visual state (`isDraggable` , `isRequired`)

2. Imports

- Explicitly imported types using `import type { ... } where necessary, especially for types like RTBoolean .`
- Relative Imports changed in `core` from `$lib` to relative `../` paths:
 - `import { ... } from "../ast/index.js"`

- `import { ... } from "../../util/index.js"`
- Consistent with ES module standards
- Removed redundant imports

3. Models

- Detect changes to the model and units in the editor to provide autosaving Note:- did this `FreEditor` , not `FreChangeManager` (could not see how to do that)
- Standardized Endpoints: Changed endpoint names to match conventions, e.g. `getUnitList` → `getModelUnitList`, `putModelUnit` → `saveModelUnit` in `ServerCommunication.ts`
- Added parameter type and changed from folder/name to model/unit as parameter names

CORE-SVELTE

1. Enhanced New Components

Components:

- **ItemGroupComponent**: Grouped items with expand/collapse functionality
- **ItemGroupComponent2**: Enhanced `ItemGroupBox` with selection capabilities
- **ListGroupComponent**: Grouped lists with add/CRUD/expand capabilities
- **MultiLineTexComponent2**: Enhanced multi-line text box implementation

Covered:

- Updated to use `$props()` to pass variables
- Updated to use `$state()` , `derived()` and `$effect()` for state management
- Changed from `on:{event}` to `on{event}` style e.g `on:click` to `onclick`
- Enhanced multi-line text editing with Quill editor integration
- Updated item group to use newest structure of text component

2. Existing Components

- Added `cssClass` as parameters extension so that the controls can be altered through an external css class
- Added `cssClass` + modifiers to certain more complex components, so that they can be modified independently e.g. `{cssClass}-container` , `{cssClass}-input` , `{cssClass}-text`
- Added new components to `renderComponent` for `MultiLineTextComponent2` , `ItemGroupComponent` , `ItemGroupComponent2` , `ListGroupComponent`

- Added `fullwidth` property and logic to `renderComponent`, so that as the container of certain components, so it can be rendered full width
- **LabelComponent**: Enforced `nowrap` styling for consistent label rendering
- **DropdownComponent**: Removed `<style>` tags to prevent style leakage into global CSS
- **TextComponent**: Ensured consistent class usage on multiple levels for styling consistency
- **Reactive State**: All components now use `$state()` for local state variables
- **Derived Values**: Computed values use `$derived()` for automatic reactivity
- **Side Effects**: All side effects use `$effect()` for proper lifecycle management

3. Imports

- Explicitly imported types using `import type { ... }` where necessary, especially for types like `RTBoolean`.
- Relative Imports changed in `core-svelte` from `$lib` to relative `../` paths:
 - `import { ... } from "../ast/index.js"`
 - `import { ... } from "../../util/index.js"`
 - Consistent with ES module standards
- Removed redundant imports

4. Context Menu

- Updated `ContextMenu` to use the `viewport` for positioning
- Added `viewport` to `allStores`

5. Limited Lists

- Added scope to the custom scoper
- Enhanced the `UtilLimitedHelper` to handle key/name pairs

6. Package Configuration

- **Svelte Version**: Updated to require Svelte 5.0.0 as peer dependency
- **Build Tools**: Updated to use Svelte 5 compatible build tools and TypeScript configuration

7. Type Safety Improvements

- **Explicit Type Imports**: All types imported explicitly using `import type { ... }` syntax
- **Component Props**: Updated all component prop interfaces to use Svelte 5 compatible types

****8. CSS + Styling**

- Local built CSS for application and freon components
- Switched to skeleton.dev components (from Flowbite)
- Switched to Lucide icons (from FontAwesome)

META

1. Limited Lists

- Updated the template to build the lists for a limited list with key/name pairs

2. External Box Generator

- Remove comma from wrapByExternal() before initializer as it already has comma when there parameters in ExternalBoxesHelper.ts
